

There when you need it.[™]

Each day thousands of patients present to emergency departments who are unconscious or unable to communicate for themselves due to medical conditions. These communication barriers may lead to treatment delays or contribute to medical errors. In an emergency, VeriMed[™] quickly provides healthcare professionals with a patient's unique medical identifier that can be used to obtain their name and pertinent personal information when he or she can't speak, can't remember, or is unconscious.

By "speaking" for patients with chronic illnesses, VeriMed offers an empowering option to affected individuals. The application may help these types of at-risk individuals obtain a better level of care by rapidly and accurately furnishing important or even lifesaving information when and if they are unable to do so.

Patient candidates who may be suitable for VeriMed include those with:

- **Chronic diseases, such as:**
 - Coronary artery disease
 - Chronic obstructive pulmonary disease (COPD)
 - Diabetes
 - Stroke
 - Seizure disorders
- **Cognitive impairment, such as:**
 - Alzheimer's disease
 - Other forms of dementia
- **Complex medical device implants, such as:**
 - Pacemakers
 - Stents
 - Joint replacements
- **Organ transplants**

VeriMed is the first and only FDA-approved patient identification system that uses implantable radio frequency identification (RFID) technology and consists of a handheld reader, a microchip approximately the size of a grain of rice containing a unique ID number, and a secure, patient database.

Using a handheld reader, authorized healthcare professionals are able to securely obtain a patient's unique 16-digit VeriChip ID number contained in a microchip in their right arm. They then look up the ID in a designated secure healthcare information database — either through the facility's electronic medical record system or through VeriChip's secure web site.

VeriMed — Enhancing emergency department operations

Providing rapid, accurate and secure patient identification and information is the cornerstone of VeriMed. These attributes correspond to

numerous benefits to emergency department operations by helping you:

- **REDUCE** the interval between admission and identification of unconscious or non-communicative patients
- **DIMINISH** the duplication of laboratory, radiology, and cardiology evaluations
- **DECREASE** the overall length of stay in the emergency department
- **REDUCE** the risk of patient identification-related medical errors
- **ENHANCE** the utilization of electronic medical records within the emergency department
- **IMPROVE** regulatory compliance concerning patient identification
- **DEMONSTRATE** the adoption of advanced technology for acquiring rapid, accurate, and secure patient identification and information

VeriMed-enable your ED for free

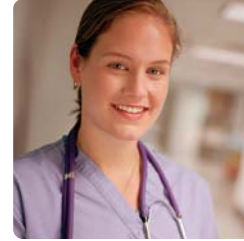

VeriChip Corporation is the premier provider of RFID solutions in healthcare and is committed to helping emergency departments improve

efficiency while enhancing the level of patient care. We're proud to offer emergency departments the free use of the VeriMed System so that they may evaluate and implement the technology without any strings attached.

The FREE VeriMed System offer includes:

- a handheld reader
- access to VeriChip's secure, patient database
- emergency department training and support
- microchips for clinical evaluation within the medical facility

Getting started with VeriMed

Signing up your emergency department for VeriMed is easy and takes just a few minutes.

Please visit www.verimedinfo.com and click on the "Medical Facilities" button, where you will find information about registering your medical facility. To get started, click on the "Get Started" button.

If you have questions about VeriMed or this special offer, please contact **1.800.970.CHIP**. For technical questions, please contact support@verichipcorp.com.

VeriChip is a subsidiary of Applied Digital and provides state-of-the-art RFID security solutions that identify, locate, and protect people, their assets, and their environments. From the world's first and only FDA-approved, human-implantable RFID microchip to the only active RFID tag with patented skin sensing capabilities, VeriChip's technology ensures the safety and security organizations are looking for. Its market-leading infant protection, wander prevention, asset tracking, and patient identification applications make VeriChip the predominant RFID solutions provider in the healthcare industry. And today, VeriChip systems are installed in over 4,000 locations worldwide in healthcare, security, industrial, and government markets making it the world's premier RFID company for people. For more information on VeriChip, please visit www.verichipcorp.com.

VeriMed™ is the first and only FDA-approved patient identification system that uses implantable RFID technology.
